Boskap Hybrid®

BOS
BOSKAP HYBRIDE

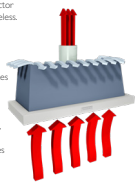
Boskap Hybrid® is an extractor hood and air purifier combined. It is the most quiet extractor ever produced.

Boskap Hybrid® designer and engineer, Bas Bos says: "I created this extractor hood based on my clients' needs: to provide them with more pleasure in cooking. We often notice that customers do spend time on choosing a stove, but hardly on selecting the most suitable extractor hood.

They need our advice to avoid making the wrong choice, because most options available make an undesirable noise in the kitchen. The demand for a very quiet extractor hood and the increased awareness of the air quality at home, inspired me to develop the Boskap Hybrid®".

Silent
Featuring an exclusive and patented extraction technology, the Boskap Hybrid® is the most quiet extractor available. When turned on, it is virtually noiseless.

Hybrid: ventilating, recirculating and energy saving
Thanks to a revolutionary hybrid system, the Bos Extractor Hybrid® extracts, ventilates and recirculates, while purifying the air. By recirculating, less air volume is wasted, which is more comfortable and energy efficient. Ventilation is important, mainly to reduce moisture and CO^2 in the kitchen. The Boskap Hybrid® system provides an automatic balance between ventilation and recirculation.



Air-purifying
The Boskap Hybrid® is developed with revolutionary maintenance free plasma filters that purify the recirculated air within the hood. This is a unique innovation in the field of extractor hood filters. These filters provide a reduction of odors, particules, allergens,, pollen, smoke and bacteria as they are completely self-cleaning. Each Boskap Hybrid® features two exclusive plasma filters providing a fast purified volume of air in a short time, equivalent to 4 regular air purifiers. The filters last 9000 ventilation hours (about 12 years of daily usage!).

In the Boskap Hybrid®, we have installed innovative grease filters. They last a lifetime and do not need to be replaced. Furthermore, they are easy to clean and dishwasher safe. The Boskap Hybrid® is the result of dedicated research combined with high end technology. When using the after-rinse option, the system provides 100% of recirculation in the kitchen. The after-rinse program allows the Boskap Hybrid® to stop automatically and it makes sure that all odors neutralized.

Lighting
Each Boskap Hybrid® also features very special lighting. It is waterproof fixtures are equipped with LED spots and provide perfect illumination above your cooking area with focused lighting that does not dazzle. The lighting is one-touch dimmable, providing the option of a pleasant reduction of illumination above your cooking area. It creates a cozy environment in your kitchen.

Function
The patented Boskap Hybrid® system provides a specific air flow, which allows cooking vapors to flow into the hood naturally. The air volume is adjustable per cooking zone which guarantees that the Boskap Hybrid® works accurately in any cooking setup. It also features two built-in power covered sockets, left and right, making cooking incredible handy. You can connect an electrical knife or a hand mixer while making soups or sauces.

Durability
The Boskap Hybrid® is made to last a lifetime. It is entirely made of 1.5 mm stainless steel in the Netherlands, all parts are from high quality made in Europe. The engine of the Boskap Hybrid® is guaranteed* for 15.000 operating hours.

Custom-made
The Boskap Hybrid® is custom made with a top or back connection (through the ceiling or through the wall). Considering the increasing number of customers willing to choose specific finishings, the unit can be applied in 3 different ways, build in: semi build-in and wall mount complete.
